# PRESENTAZIONE

Il presente volume contiene i dati della rete di stazioni nivometeorologiche automatiche della montagna veneta relativi all'anno 2020.

Come di consueto, per ciascun parametro, i dati sono presentati in tabelle annuali dove sono riportati i singoli valori giornalieri nonché i valori mensili ed annuali come medie, minime, massime e deviazione standard.

Oltre ai dati relativi ai parametri misurati alle stazioni ne sono stati riportati altri afferenti ad alcuni parametri fra quelli più significativi dal punto di vista nivologico, derivati secondo particolari algoritmi di calcolo.

I dati sono preceduti da una parte generale dove sono descritte le caratteristiche della rete, delle singole stazioni e dei sensori nonché le modalità di esecuzione delle misure che sono suscettibili ad essere modificate nel tempo. Un importante paragrafo è stato inoltre dedicato alla illustrazione dei criteri di calcolo e delle modalità di validazione dei dati al fine di meglio chiarire agli eventuali utilizzatori l'attendibilità e i limiti di impiego dei singoli dati.

# INTRODUCTION

This text includes the data collected by the network of automatized snow-meteorologic sampling stations of Veneto mountains in 2020.

With reference to every parameter, as usual data are presented in yearly tables which include average, minimum, maximum values and gaps in relation to the standard values. Data are collected on a monthly and daily base.

Beyond data referring to parameters measured by the sampling stations, the text also includes data referring to very important snow parameters resulting from algorithmic calculations.

The general part of the text describes the main features of the network, of the various sampling stations, of sensor and of the measurement techniques which could change in the future. An important paragraph has been devoted to the explanation of calculation criteria and to methods for demonstrating data. In this way readers will be able to understand the reliability and limits of the various data.

Le elaborazioni grafiche dei parametri temperatura dell'aria, velocità del vento, radiazione solare ed umidità relativa, oltre ad indicare l'andamento giornaliero (linea sottile), hanno una linea più marcata che rappresenta la media mobile semplice della serie.

La media mobile è di ordine 4 per i parametri temperatura dell'aria e radiazione solare, di ordine 5 per la velocità del vento e di ordine 6 per l'umidità relativa.
